

QC per 8 um bin — violin width: number of bins; dashed line: filter threshold (≥ 100 transcripts, ≥ 50 genes, $< 30\%$ mito)

Extended Data Fig. 2 | Bin-level QC.

Transcripts, genes and mitochondrial fraction per 8-um bin. Dashed lines, filter thresholds (≥ 100 transcripts,

≥ 50 genes, $< 30\%$ mito). Bins retained: 286,973 (P1CRC), 428,405 (P2CRC), 373,156 (P5CRC).
